

POC TASK 1 – Creating and Running a Basic HTML File Using Header command in VS code

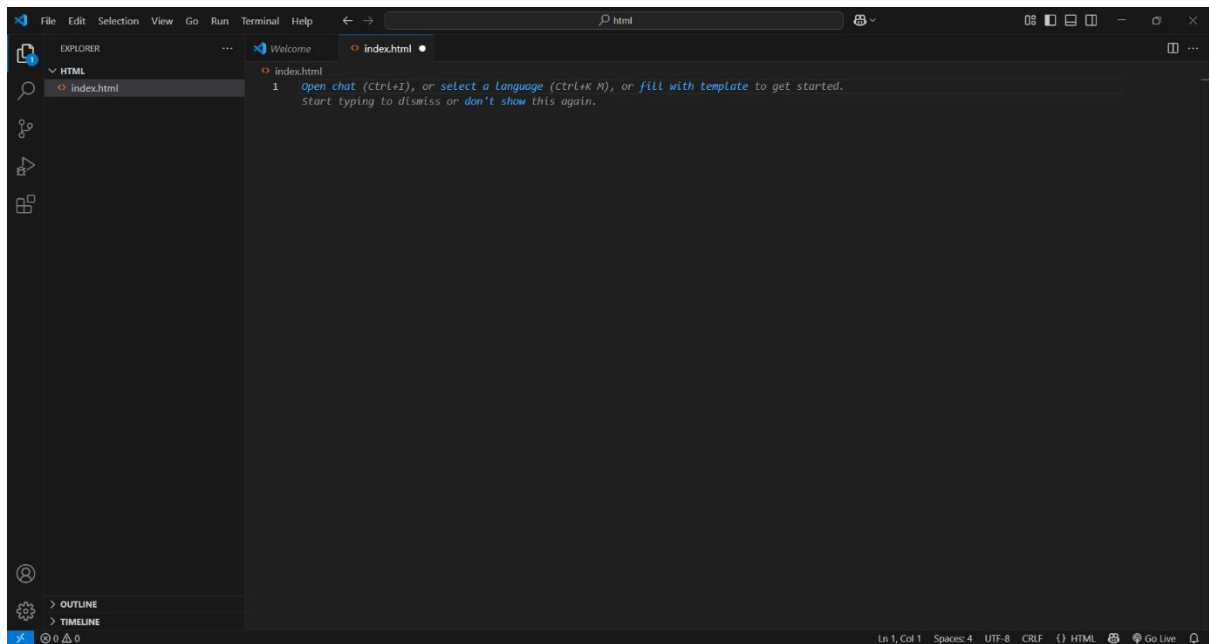

Step 1: Create a Folder on Desktop

- . I created a new folder on my Desktop named HTML.

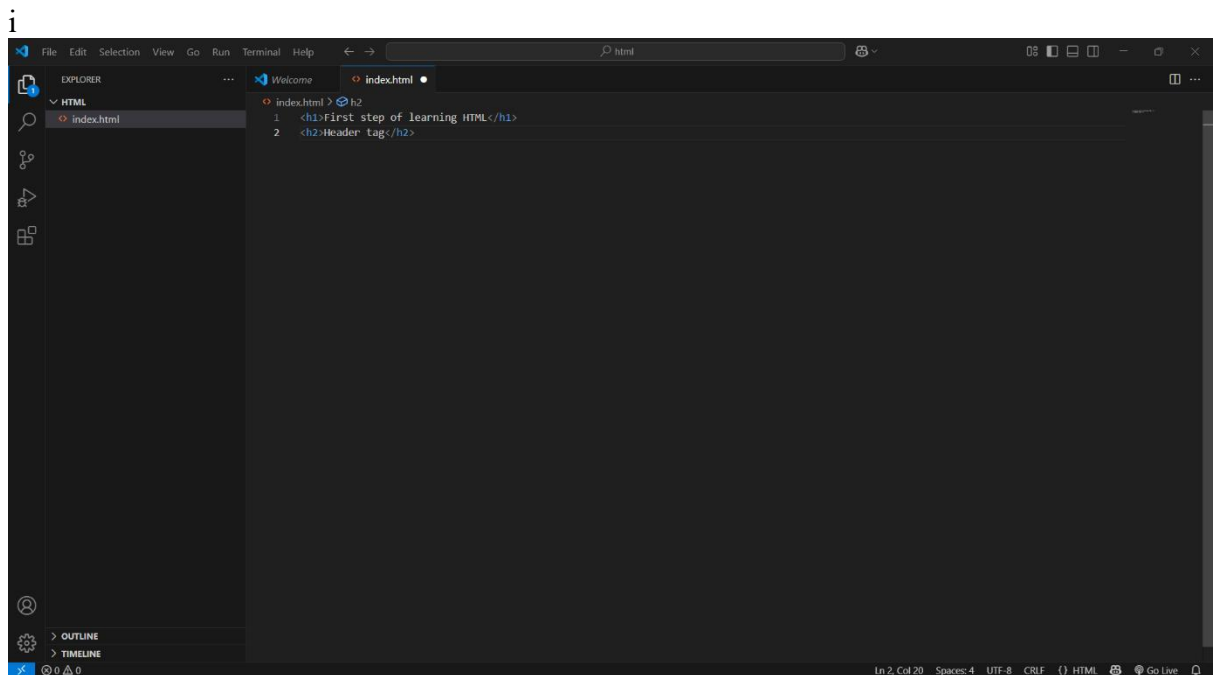

Step 2: Open Folder in Visual Studio Code

- . I opened VS Code.
- . Clicked on File > Open Folder, then selected the HTML folder.

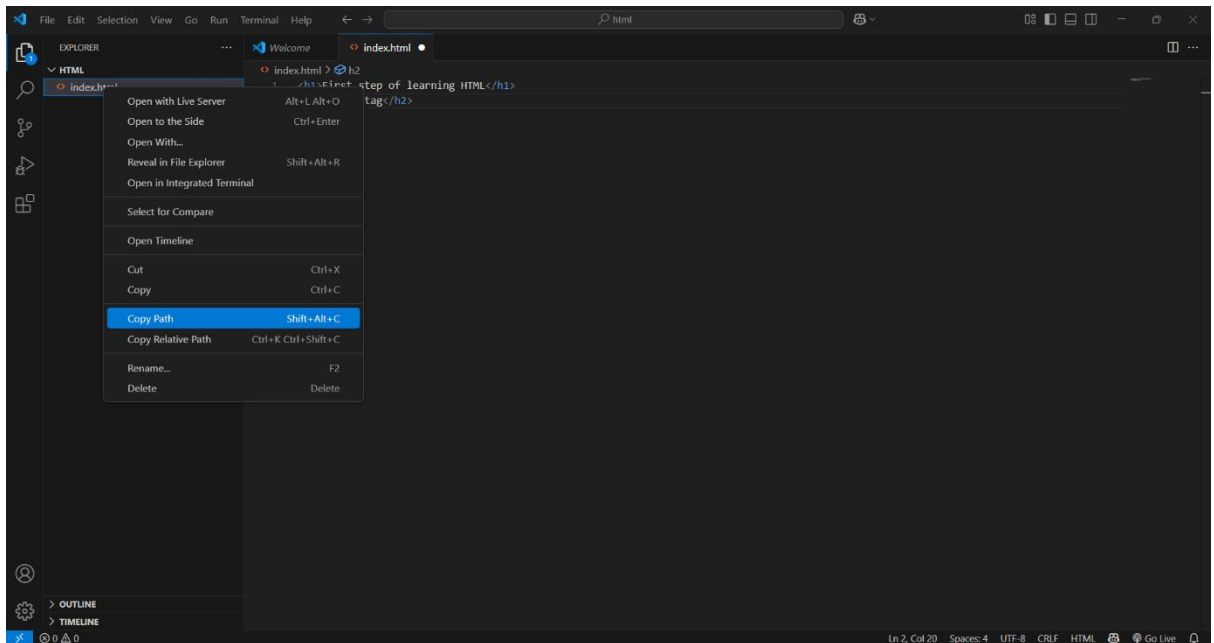

Step 3: Create an HTML File

- Inside VS Code, I created a new file named index.html.
- I typed the following code into index.html:

Step 4: Save the File

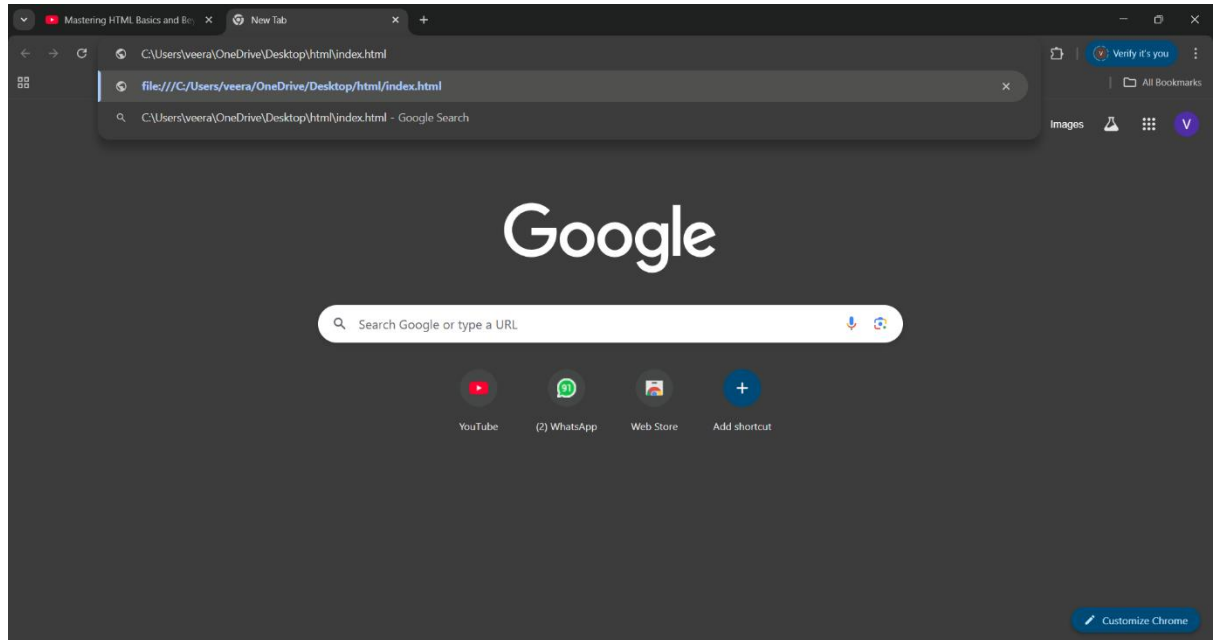

- I pressed **Ctrl + S** (or **File > Save**) to save the index.html file.

Step 5: Open the File in a Browser

- I right-clicked the index.html file and selected **Copy Path**.
- Then I opened my browser, pasted the copied path into the address bar (example:

file:///C:/Users/YourName/Desktop/MyWebsite/index.html), and pressed Enter.

Output in Browser

- The browser displayed the output:
